
CARBON SINKS ATLAS FOR SOUTH AFRICA

SAR Above Ground Woody Biomass (tDM/ha)

Metadata Date Stamp:

17 November 2015

DATASET DESCRIPTION

Dataset Title:**Data:**

SAR_1km_AboveGroundBiomassWoody_tonne_ha_DEA_CSIR_1.1-2015-10-27

Metadata:

SAR_1km_AGBwoody_tonne_DryMatter_per_ha_OR_2015_Q4_METADATA

Dataset Reference Date:

2015/10/27

Data quality:

Good – The product was developed through the integration of 2010 ALOS PALSAR-1 Synthetic Aperture Radar (SAR) images, LiDAR tracks, and field data of woody biomass. Accuracies of this layer are dependent on the accuracies of various base layers used in the different modelling stages.

Dataset Responsible Party:

Department of Environmental Affairs / Director Enterprise Geospatial Information Management

Geographic Location of the Dataset: *Eastern Mpumalanga and Limpopo ('Lowveld'), South Africa*

West 29.826685

East 32.225185

North -22.250243

South -26.076675

Keywords:

Above ground woody biomass, LiDAR, ALOS PALSAR, SAR

Dataset Language:

English (SOUTH AFRICA)

Dataset Character Set:

utf8 - 8 bit UCS Transfer Format

Dataset Topic Category:

007 = Environment (ISO 19115 Topic category)

Dimensions:

X: 189 Y: 354 Bands: 1

Spatial Resolution of the Dataset:

1189.318433 Meter

No Data Value:

-1

Data Type:*Float64 – Sixty four bit floating point***Raster Format:***GeoTiff***Data Release classification:**

Release classification	Description	Time frame	Example
OR	Official release	Quarter 4 30 November 2015	SAR_1km_AGBwoody_tonne_Dry Matter_per_ha_OR_2015_Q4

Citation:**Citation Information:****Originator:** *CSIR Natural Resources and Environment (unpublished)***Abstract:**

Above Ground Woody Biomass (AGB_{woody}) is the total dry biomass of woody plants above 1m height and is expressed in tonnes per hectare. The product was developed through the integration of 2010 ALOS PALSAR-1 synthetic aperture radar images, LiDAR tracks, and field data of woody biomass. The LiDAR tracks were processed to derive a canopy height model for woody vegetation above 1 m at 1m pixel size. A detailed LiDAR (AGB_{woody}), product was generated at 25m pixel size using LiDAR woody cover and height products and field data. The dual-polarized (HV, HH) SAR bands were modelled using the LiDAR woody aboveground biomass as reference data for calibration and validation of the final SAR woody aboveground biomass (AGB_{woody}) map.

The maps were produced and can be viewed in the on-line atlas at 75m resolution, but are downloadable at 1km resolution.

Units: Above Ground Woody Biomass in (tonnes) per hectare at a 1km x 1km resolution

Purpose:

This data set is part of a series of output data layers generated by CSIR for the Department of Environmental Affairs (DEA) as part of the South African Carbon Sinks Atlas. The data demonstrate a potential for improving existing estimations of Above Ground Woody Biomass (AGB_{woody}) using SAR and LIDAR remote sensing data

Supplemental Information:*None***Lineage Statement:**

The data was produced in October 2015, and is being released on-line for the first time in Nov 2015

ATTRIBUTE INFORMATION**Attribute Description:**

Field name	Alias Name	Data Type	Description	Example
Cell value	Cell value	64-bit Floating point	This field contains Above Ground Woody Biomass as measured in Tonne Dry Matter per hectare (tDM/ha)	50

SUPPLEMENTARY INFORMATION

None

DATA MAINTENANCE

Dataset last updated:

2015/11/16

Time Period of Content:

Calculated to represent Above Ground Woody Biomass (AGBwoody) for the year 2010

Maintenance and update frequency:

No updates
